OFF-SHORE PLATFORMS

Off-shore platform cables are critical to the efficiency and safety of offshore operations, Sensitherm designs and manufactures cables that are highly reliable and resistant to extreme conditions.

√ Compound type SHF2 acc. To IEC 60092-359
√ Resistance to Water Absorption 24 hrs at 100 °C as IEC 60811
√ Resistance to Ozone as EN 50396:2007-8.1 A, B
√ Optical Density of Smoke as EN 61034-2

Our SHF2 outer sheath resistance to costant exposure to wear-inducing elements such as humidity, saltwater and other aggressive chemicals typical of naval and off-shore applications, while also being fire-resistant.

Sensitherm's key strenghts include the ability to customize products to precisely meet your requirements with enormous flexibility, offering you a tailor-made off-shore cable.

Extreme applications

MUD

Compound type SHF2 acc. to IEC 60092-360
Thermoset, crosslinked by Dry Silane procedure to be resistant to organic fluids
Conforming to NEK 606:2016 requisitions

√ Resistance to oils as per IRM 902 e 903 along 7 days at 100°C
√ Resistance (mud water based) to calcium bromide along 56 days at 70°C
√ Resistance to water absorption as per IEC 60811 along 7 days at 70°C

Cables fit for offshore applications on platforms, (floating prod. storage and offloading unit), drilling pumps…and where organic fluids are present in petrochemical environments

GAS TIGHT

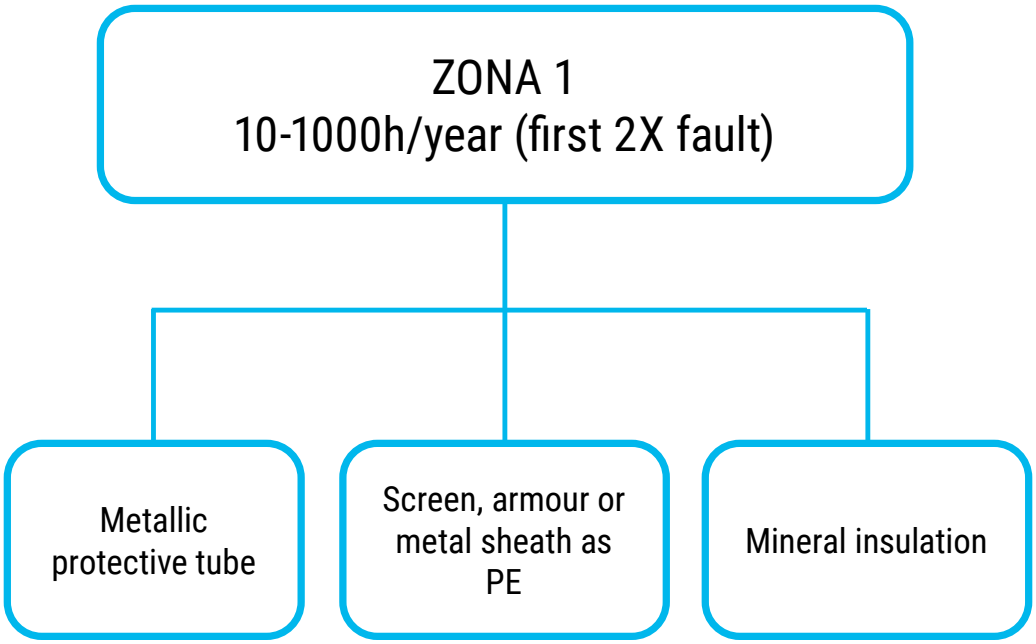
Gelly filled cable according to IEC 60079-14 annexe E
To prevent gas and vapour migration all along the cable
inbetween cores interstices
Fit for use in explosion proof and hazardous areas ATEX

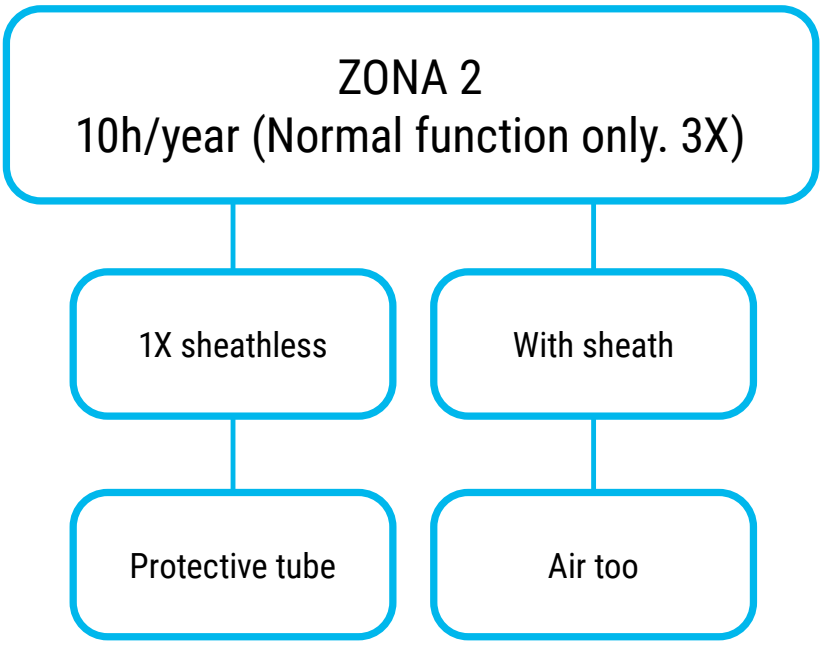
√ In-house testing equipment to release immediate test report

Cables suitable for use in gas plants with high risk of gas dispersion,when buffered cable glands are not provided

ATEX

Conductor – Cable Types – GAS





CABLES in ATEX systems:

The ATEX EN60079-14 standard regarding cables considers them to be passive elements, so construction instructions are given according to the type of system chosen by the designer, but it does not define a specific certification or test method or approval, so we can say that there is no “ATEX” certification for cables.

The general and main requirements for cables used in the ATEX zone provide that the sheath must be compact and extruded in a way that is integral with the internal “compression” cable (not in a tube) and as circular as possible, such as to allow the cable gland to tighten the cable compactly, both on the outside of the sheath and inside.
The sheaths must be resistant to the UV rays and chemical agents present in the system. If this is not possible, the cable must be laid inside a suitable pipe following the provisions of EN60079-14.
In particularly heavy systems, where the risks of mechanical damage and chemical agents are high, armed and shielded cables must be used.

With regard to the fire propagation protection in the standard, it is prescribed that the cables must be flameproof according to the IEC60332.3-22 standards, otherwise they must be laid in tunnels filled with sand.
With regard to the laying of cables in systems where they may be present, even only in case of failure of the toxic and/or corrosive gas, and that run from the field to the safe area (control room or manned technical areas), it is essential to ensure that no gas can travel through the cable inside it, due to the “chimney effect”, and enter the manned rooms, causing intoxication or fire/explosion. To do this, there are two methods: the most widely-used method is the use of buffered cable glands (so-called ‘three-part glands’) that, once installed, are filled with a special blocking resin, or there are even more high-performance buffered cable glands for more demanding situations.
Otherwise, as provided for in Annex “E” of the EN60079-14 standard, buffered cables must be used inside that do not allow the air/gas to circulate according to a precise test.
With regard to EEx-d systems, since the signals or power supplies that travel through the dangerous area inside the cable are not protected (e.g. by an IS barrier in a safe area), it is extremely important to protect the cable mechanically from damage caused from the outside. This can be done by putting the cables inside conduit pipes or by arming the cable with galvanised iron.

As far as the EEX-I systems are concerned, the signals inside the cables are protected by the intrinsically safe barriers located in the control room, so even if the cable accidentally breaks, it could not cause any damage or ignition of explosive mixtures.
Consequently, when armed cables or cables with mechanical protections (e.g. cables in tubes) are used, it is only for system reasons and so as not to risk losing the signals in the event of cable damage.
Meanwhile, for cables in intrinsically safe systems, it is essential to pay attention to any energy chains between the pairs or induced magnetic fields that could come from other external cables.

For this reason, it is essential to use suitably shielded cables (usually in aluminium/PET tape with drainage), possibly also on the single pairs plus the total of the pairs, and to place all the screens on the ground in one place on a special ground bar in the control room and segregate the circuits so as to keep the cables with IS signals distant or in channels separate from all the other cables containing other circuits. In addition, it is forbidden to put other non-EEx-I signals inside the EEx-I circuit cables.
Usually a quality cable for intrinsically safe circuits should have the lowest possible capacity values, </= 200pF/mt, as the cable could act as a capacitor, accumulating energy inside it, which when added to the energy delivered by the barrier could cause triggering in the dangerous zone and should have inductance values that are equally low, </= 1microH/mt. This is because the inductance generated by the single pairs of the cable could create inductive fields that could chain an energy in the adjacent pairs, which when added to the energy generated by the barrier could generate triggering in the dangerous zone and a degree of insulation of the cable of at least 500V.

For EEx-e systems, the same rules apply as those for EEx-d systems.

PRODOTTI DA COSTRUZIONE

Il Comitato Elettrotecnico Italiano ha emesso, in data 1° settembre 2016, la Norma CEI UNEL 35016 che fissa, sulla base delle prescrizioni normative installative CENELEC e CEI, le quattro classi di reazione al fuoco per i cavi elettrici in relazione al Regolamento Prodotti da Costruzione (UE 305/2011), che consentono di rispettare le prescrizioni installative nell'attuale versione della Norma CEI 64-8.
Norma CEI UNEL si applica a tutti i cavi elettrici, siano essi per il trasporto di energia o di trasmissione dati con conduttori metallici o dielettrici, per installazioni permanenti negli edifici e opere di ingegneria civile con lo scopo di supportare progettisti ed utilizzatori nella scelta del cavo adatto per ogni tipo di installazione.

I requisiti considerati rilevanti per i cavi

A) SICUREZZA IN CASO DI INCENDIO (Requisito n. 2 – Allegato 1 del Regolamento CPR)

Le opere di costruzione devono essere concepite e realizzate in modo che, in caso di incendio:
1. La generazione e la propagazione del fuoco e del fumo al loro interno siano limitate
2. La propagazione del fuoco a opere di costruzione vicine sia limitata
3. Gli occupanti possano abbandonare le opere di costruzione o essere soccorsi in altro modo
4. Si tenga conto della sicurezza delle squadre di soccorso

B) IGIENE, SALUTE E AMBIENTE (Requisito n. 3 – Allegato 1 del Regolamento CPR)

Le opere di costruzione devono essere concepite e realizzate in modo da non rappresentare, durante il loro intero ciclo di vita, una minaccia per l'igiene o la salute e la sicurezza.
La conformità dei cavi al requisito di igiene, salute e ambiente si ritiene implicitamente assolto dal rispetto della Direttiva RoHS (2011/65/UE e successivi adeguamenti) e del Regolamento REACH (1907/2006/CE).

Il Regolamento Prodotti da Costruzione per i Cavi

I CAVI ELETTRICI RICADONO NEL REGOLAMENTO CPR?

Tutti i cavi elettrici per energia, controllo e telecomunicazioni di qualsiasi tensione e tipo di conduttore sono richiamati dalla tabella 1 dell'allegato IV del Regolamento CPR che definisce i vari livelli di prestazione con l'obiettivo di limitare la generazione la propagazione dell'incendio e le emissioni di fumo, riconoscendo l'importanza del loro comportamento ed il loro ruolo in caso di incendio.

COSA COMPORTA PER I CAVI RICADERE NELLO SCOPO DELLA CPR?

Con l'emissione di un cavo sul mercato occorrerà che il produttore rediga la Dichiarazione di Prestazione (DoP: Declaration of performance) di quel cavo come da allegato III del Regolamento CPR e che sia in possesso dei requisiti necessari per poter porre la marcatura CE assumendosi la responsabilità della conformità del prodotto a quanto dichiarato. La DoP dovrà accompagnare ogni cavo immesso sul mercato fino all'utilizzatore finale, il quale dovrà esibirla alle autorità competenti qualora esse lo richiedano (art. 7 del Regolamento CPR) potrà essere fornita informa cartacea o su supporto elettronico.

COSA SI INTENDE PER INGEGNERIA CIVILE?

Si definiscono opere di ingegneria civile i lavori di costruzione, manutenzione, riparazione, demolizione, conservazione, risanamento, ristrutturazione o equipaggiamento, la trasformazione, il rinnovamento o lo smantellamento di opere fisse, permanenti o temporanee, in muratura, in cemento armato, in metallo, in legno o in altri materiali, comprese le parti strutturali delle linee elettriche e le parti strutturali degli impianti elettrici, le opere stradali, ferroviarie, idrauliche, marittime, idroelettriche e, solo per la parte che comporta lavori edili o di ingegneria civile, le opere di bonifica, di sistemazione forestale e di sterro. Sono, inoltre, lavori di costruzione edile o di ingegneria civile gli scavi ed il montaggio e lo smontaggio di elementi prefabbricati utilizzati per la realizzazione di lavori edili o di ingegneria civile. (Testo unico sulla salute e sicurezza sul lavoro art. 89, comma 1, lettera a).

QUALI CAVI SONO INCLUSI SOTTO LA CPR? – Fonte Europacable –

Cavi per installazioni permanenti nelle costruzioni che rientrano nell'ambito di due tipologie di prodotti:

- Cavi destinati ad essere utilizzati per la fornitura di energia elettrica e delle comunicazioni in edifici e altre opere di ingegneria civile soggetti a requisiti prestazionali di reazione al fuoco;
- E in futuro cavi soggetti a requisiti prestazionali di resistenza al fuoco destinati ad essere utilizzati per la fornitura di energia elettrica, delle comunicazioni e rilevazione/allarme incendio in edifici e altre opere di ingegneria civile dove è essenziale assicurare la continuità nella fornitura di energia e/o segnale per la sicurezza dell'installazione.

Thermocouple extension cable

SENSITHERM S.r.l. is specialized in the production of high-quality extension thermocouple cables, with insulation in PVC, XLPE, G16, as detailed in the table below:

INSULATION MATERIAL	min. T °C	max. T °C
PVC	-40	80
Polyethylene	-40	70
Teflon FEP (*)	-80	205
Teflon PTFE (*)	-80	260
Silicone	-55	180
fiberglass	-70	250
G16	-40	90

In many industrial thermal processes, particularly those conducted at high temperatures, the use of thermocouples is the simplest, most accurate and cost-effective temperature detection method. To make the connection of the thermocouple to the instrumentation, it is necessary to use materials having the same F.e.m. as the torque output, otherwise spurious F.e.m. could be generated in the joints. The best solution is to use the same materials that the thermocouple is made of. In this case, the cables are referred to as " EXTENSION CABLES."
Should this solution prove too expensive, alloys of a different type can be used; in this case the F.e.m. of the coupled cables is the same as that of the thermocouple, although the F.e.m. of each individual branch is usually not the same. Cables made from these materials are referred to as " COMPENSATION CABLES ".

Weight and diameter: Are theoretical + / - 10%

Intended use: Instrumentation cable in buildings and other civil engineering works with the objective of limiting the generation and spread of fire and smoke.

Instrumentation Cable – 101-2 CPR EU 305/2011

Conductor, G16 INSULATION, INDIVIDUAL (IF REQUIRED) AND OVERALL SCREEN, M16 OUTER SHEATH. IEC 60332.1 IEC 60332.3 – HALOGEN FREE

Technical Specifications n° 101-2/23 10/11/2023 Rev. 0

Type: FG16XHOHM16 0,6/1 KV - FG16OHM16 0,6/1Kv

Conductor: Flexible metal conductor according to IEC60228

Insulation: EPR G16 type extruded compound

Temperature range -30 +90° C
Temperature laying 0 +70° C

SIZE	THICKNESS
0,75 mm²	0,70 ± 0,02 mm
1,0 mm²	0,70 ± 0,02 mm
1,5 mm²	0,70 ± 0,02 mm
2,5 mm²	0,70 ± 0,02 mm

Laying up: Twisted to pair, Blue - Black numbered (or to be agreed)

Pair screen: (if necessary) Applied over the single pair/triad will be wrapped with polyester tape and shielded with Aluminium/Mylar tape 100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 mm size 0,5sqmm, over the screen will be placed a further Mylar tape.

Overall screen: Applied over total assembly will be wrapped with polyester tape and shielded with Aluminium/Mylar tape100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 size 0,5sqmm.

Outer sheath: M16 LSZH extruded compound
Colour: Blue/Black/Green (or to be agreed)

Marking: On the outer sheath "Sensitherm – FG16XHOHM16 0,6/1 KV Siz. IEC 60332.3
WWW/YY (Batch/Num.) Cca s1b-d1-a1 0001 m"

Performance:
- Test voltage core to core 3,5 KV
- Flame retardant according to IEC 60332-3-24, CEI 20-22/3
- Low smoke and Halogen free as per IEC 60754-2, CEI 20-37/2
- Low smoke density emiss. IEC 61034 1/2
- Hydrocarbon and UV resistant
- Cable for intrinsically safe application
- Inductance </= 0,90 mH/Km
- Capacitance /= 0,200 µF/Km
- This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)
- EN50575 tested for approval
- CPR approved Cca s1b,d1,a1

Performance:
- Test voltage core to core 3,5 KV
- Flame retardant according to IEC 60332-3-24, CEI 20-22/3
- Low smoke and Halogen free as per IEC 60754-2, CE I20-37/2
- Low smoke density emiss. IEC 61034 1/2
- Hydrocarbon and UV resistant
- Rodent resistant
- Fit for direct burial
- CPR approved Cca s1b,d1,a1
- Cable for intrinsically safe application
- Inductance </= 0,90 mH/Km
- Capacitance /= 0,200 µF/Km
- This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)
- EN50575 tested for approval

Weight and diameter: Are theoretical + / - 10%

Intended use: Instrumentation cable in buildings and other civil engineering works with the objective of limiting the generation and spread of fire and smoke.

Instrumentation Cable – 102-3 CPR EU 305/2011

Conductor, G16 INSULATION, OVERALL SCREEN, M16 INNER SHEATH, STEEL WIRE ARMOUR, M16 OUTER SHEATH
IEC 60332.1 IEC 60332.3 - HALOGEN FREE

Technical Specifications n° 102-3/23 of 10/11/2023 Rev. 0

Type: FG16XOHM16FM16 0,6/1KV, FG16OHM16FM16 0M6/1Kv

Conductor: Flexible metal conductor according to IEC 60228

Insulation: EPR G16 type extruded compound

Temperature range -30 +90° C
Temperature laying 0 +70° C

SIZE	THICKNESS
0,75 mm²	0,70 ± 0,02 mm
1,0 mm²	0,70 ± 0,02 mm
1,5 mm²	0,70 ± 0,02 mm
2,5 mm²	0,70 ± 0,02 mm

Laying up: Twisted to pair, Blue - Black numbered (or to be agreed)

Overall screen: Applied over total assembly will be wrapped with polyester tape and shielded with Aluminium/Mylar tape100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 size 0,5sqmm.

Inner sheath: M16 LSZH extruded compound

Armour: Galvanized steel round wires 0,9 mm plus wrapping polyester tape (SWA)

Outer sheath: M16 LSZH extruded compound
Colour: Blue/Black/Green (or to be agreed)

Marking: On the outer sheath “Sensitherm – FG16XOHM16FM16 0,6/1 KV Siz. IEC 60332.3
WWW/YY (Batch/Num.) Cca s1b-d1-a1 0001 m”

Performance:
- Test voltage core to core 3,5 KV
- Flame retardant according to IEC 60332-3-24, CEI 20-22/3
- Low smoke and Halogen free as per IEC 60754-2, CE I20-37/2
- Low smoke density emiss. IEC 61034 1/2
- Hydrocarbon and UV resistant
- Rodent resistant
- Fit for direct burial
- CPR approved Cca s1b,d1,a1
- Cable for intrinsically safe application
- Inductance </= 0,90 mH/Km
- Capacitance /= 0,200 µF/Km
- This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)
- EN50575 tested for approval

Weight and diameter: Are theoretical + / - 10%

Intended use: Instrumentation cable in buildings and other civil engineering works with the objective of limiting the generation and spread of fire and smoke.

Instrumentation Cable – 102-4 CPR EU 305/2011

Conductor, G16 INSULATION, INDIVIDUAL (IF REQUIRED) AND OVERALL SCREEN, M16 INNER SHEATH, STEEL WIRE ARMOUR, M16 OUTER SHEATH
IEC 60332.1 IEC 60332.3 - HALOGEN FREE

Technical Specifications n° 102-4/23 of 10/11/2023 Rev. 0

Type: FG16XHOHM16FM16 0,6/1KV, FG16OHM16FM16 0M6/1Kv

Conductor: Flexible metal conductor according to IEC 60228

Insulation: EPR G16 type extruded compound

Temperature range -30 +90° C
Temperature laying 0 +70° C

SIZE	THICKNESS
0,75 mm²	0,70 ± 0,02 mm
1,0 mm²	0,70 ± 0,02 mm
1,5 mm²	0,70 ± 0,02 mm
2,5 mm²	0,70 ± 0,02 mm

Laying up: Twisted to pair, Blue - Black numbered (or to be agreed)

Pair screen: (if necessary) Applied over the single pair/triad will be wrapped with polyester tape and shielded with Aluminium/Mylar tape100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 mm size 0,5sqmm, over the screen will be placed a further Mylar tape.

Overall screen: Applied over total assembly will be wrapped with polyester tape and shielded with Aluminium/Mylar tape100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 size 0,5sqmm.

Inner sheath: M16 LSZH extruded compound

Armour: Galvanized steel round wires 0,9 mm plus wrapping polyester tape (SWA)

Outer sheath: M16 LSZH extruded compound

Colour: Blue/Black/Green (or to be agreed)

Marking: On the outer sheath “Sensitherm – FG16XHOHM16FM16 0,6/1 KV Siz. IEC 60332.3 WWW/YY (Batch/Num.) Cca s1b-d1-a1 0001 m”

Performance:
- Test voltage core to core 3,5 KV
- Flame retardant according to IEC 60332-3-24, CEI 20-22/3
- Low smoke and Halogen free as per IEC 60754-2, CE I20-37/2
- Low smoke density emiss. IEC 61034 1/2
- Hydrocarbon and UV resistant
- Rodent resistant
- Fit for direct burial
- CPR approved Cca s1b,d1,a1
- Cable for intrinsically safe application

- Inductance </= 0,90 mH/Km
- Capacitance /= 0,200 µF/Km
- This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)
- EN50575 tested for approval

Performance:

- Test voltage core to core 3,5KV
- Flame retardant according to IEC60 332-3-22, CEI 20-22/2
- Low smoke and Halogen free as per IEC 60754-2, CEI 20-37/2
- Low smoke density emiss. IEC 61034 1/2
- Hydrocarbon and UV resistant
- Rodent resistant
- Fit for direct burial

This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)

- EN50575 tested for approval, Cca s1b,d1,a1

Laying up: Twisted to core, UNEL (or to be agreed)

Inner sheath: M16 LSZH extruded compound

Armour: Galvanized steel round wires 0,9 mm plus wrapping polyester tape (SWA)

Outer sheath: M16 LSZH extruded compound
Colour: Grey/Black/Green (or to be agreed)

Marking: On the outer sheath "Sensitherm – FG16OM16FM16 0,6/1 KV Siz. IEC 60332.3
WWW/YY (Batch/Num.) Cca s1b-d1-a1 0001 m"

Performance:

- Test voltage core to core 3,5KV
- Flame retardant according to IEC60 332-3-22, CEI 20-22/2
- Low smoke and Halogen free as per IEC 60754-2, CEI 20-37/2
- Low smoke density emiss. IEC 61034 1/2
- Hydrocarbon and UV resistant
- Rodent resistant
- Fit for direct burial

This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)

- EN50575 tested for approval, Cca s1b,d1,a1

Laying up: Twisted to cores UNEL color (or to be agreed)

Overall screen: Applied over total assembly will be wrapped with polyester tape and shielded with Aluminium/Mylar tape100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 size 0,5sqmm.

Inner sheath: M16 LSZH extruded compound

Armour: Galvanized steel round wires 0,9 mm plus wrapping polyester tape (SWA)

Outer sheath: M16 LSZH extruded compound
Colour: Grey/Black/Green (or to be agreed)

Marking: On the outer sheath “Sensitherm – FG16OHM16FM16 0,6/1 KV Siz. IEC 60332.3

Performance:
- Test voltage core to core 3,5KV
- Flame retardant according to IEC60332-3-22, CEI20-22/2
- Low smoke and Halogen free as per IEC60754-2, CEI20-37/2
- Low smoke density emiss. IEC61034 1/2
- Hydrocarbon and UV resistant
- Rodent resistant
- Fit for direct burial
- This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)
- EN50575 tested for approval

Weight and diameter: Are theoretical + / - 10%

Intended use: Control and power cable in buildings and other civil engineering works with the objective of limiting the generation and spread of fire and smoke.

Instrumentation Cable - 108 CPR ECA

CU, PVC INSULATED, INDIVIDUAL AND OVERALL SCREEN, PVC BEDDING, SWA, PVC OUTER SHEATH

Technical Specifications n° 108/23 of 10/11/2023 Rev. 0

Type: FR2XOHRFR 450/750V - FR2XHOHRFR 450/750V
FR2XOHRAR 450/750V - FR2XHOHRAR 450/750V

Conductor: Flexible plain copper conductor according to IEC60228 cl.5 size

Insulation: PVC extruded compound R2 type extruded Thickness: 0,6mm
Temperature range -25 + 80° C
Temperature laying -5 + 70° C

SIZE	THICKNESS
0,75 mm²	0,60 ± 0,02 mm

Laying up: Twisted to pair, color Blue - Black numbered, triad Blue – Brown – Black (or to be agreed)

Pair/Triad screen: (if required) Applied over the single pair/triad will be wrapped with polyester tape and shielded with Aluminum/Mylar tape 100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 size 0,5sqmm, over the screen will be placed a further Mylar tape.

Overall screen: Applied over total assembly will be wrapped with polyester tape and shielded with Aluminum/Mylar tape 100% coverage and 25% overlap with metal side in contact with a tinned copper drain wire 7x0,30 size 0,5sqmm.

Bedding: PVC, Polyvinylchloride Low Smoke and Fume extruded compound
Thickness: 1,0mm

Armour: SWA, Galvanized steel round wires or SWB Galvanized steel bride wires

Outer sheath: PVC, Polyvinylchloride Low Smoke and Fume extruded compound
Colour: Blu/Black/Grey (or to be agreed)

Marking: On the outher sheath " manufacturer's name year & description cable " with ink-jet printer.

Performance:
- Conductor resistance 26 ohm/Km (+5% for multipair)
- Test voltage core to core 3 kv
- Flame retardant according to IEC60332-3-24, CEI20-22/3
- Low smoke and fume as per IEC60754-2, CEI20-37
- HCL emission </= 22%
- Hydrocarbon UV resistant
- Inductance </= 0,90 mH/Km
- Capacitance </= 0,25 microF/Km

Performance:
- Test voltage core to core 3,5 KV
- Flame retardant according to IEC 60332-3-24, CEI 20-22/3
- Low smoke and Halogen free as per IEC 60754-2, CEI 20-37/2
- Low smoke density emiss. IEC 61034 1/2
- Hydrocarbon and UV resistant
- Fire resistant EN50200 PH120
- Cable for intrinsically safe application
- Inductance </= 0,90 mH/Km
- Capacitance /= 0,200 µF/Km
- This cable is suitable to be used in ATEX area following the EN60079-14 prescription (excluding annex E)

Types of shields

Aluminum/Mylar tape plus drain conductor for single pair shielding and/or for total shielding of the stranded cable.
Copper tape.
Shield in bare or tinned copper braid.

SCHIELDING

The shield is used to protect the cable from internal (single pair/triad shield) or external (total shield) interference.

SINGLE PAIR/TRIAD INTERNAL SHIELD

- Internal interference is transmitted via capacitive or electromagnetic induction, when pulsating direct current signals or alternating current signals are transmitted in the various pairs/triples of the cable.
- To avoid this interference (which in the case of intrinsically safe signals could even be dangerous), the individual elementsofthe cable are wrapped with Aluminium/Mylar tapes with a tinned copper drain conductor which runs in contact with the Aluminum part of the tape and is used to ground the screen itself which will take place on a specially provided ground bar and in a single point which is usually in the switchboard in a safe area.

TOTAL SCREENING OF THE CABLE AGAINST EXTERNAL INTERFERENCE:

- In the case of interference generated from outside, the type and material of the screen must be suitable for the type of interference;
- In the case of electrostatic interference (ex. induced by a power line) this coupling causes a disturbance signal which is superimposed on the signal transmitted in the conductors.
- To eliminate this risk, the cable is wrapped around the whole with Aluminium/Mylar tapes with a tinned copper drainage conductor which runs in contact with the Aluminum part of the tape and serves to ground the shield itself which will take place on a bar of earth affixed and in a single point which is usually in the switchboard in a safe area.
- In the case of high intensity electrostatic discharges which usually originate outside the cable, the screen that lends itself best is that of Aluminium/Mylar tape + copper braid where the aluminum and the braid are in contact with each other.
- In the case of particular cables where a low impedance is required (data cables, computers) or a low resistance value of the shield (power supply to motors from inverters) or for mobile cables, copper braid shielding is recommended as it is mechanically more resistant.

Armour

ARMOUR The main function of the Armour is to mechanically protect the cable from shocks, abrasions, crushing, rodents and to give greater tensile strength to the cable during laying operations. This cable protection is also essential in ATEX explosion risk plants, especially for the EExdversion where accidental breaking of the cable in the dangerous area could cause dangerous sparks. The reinforcement is also used in “general purpose” systems for outdoor installation when it is preferable to save on assembly systems. The solutions are various according to the application.

SWB

- Braided armour of galvanized iron wires.
- Light armour which gives the cable a good tensile strength and good protection against rodents (over 80% coverage), furthermore it allows for a small bending radius and good flexibility.

SWA

- Armour bundle of galvanized iron wires.
- Heavy armour suitable for heavy use with excellent resistance to traction, rodents (over 90% coverage), crushing, has a moderate radius of curvature and flexibility.
- It is usually made with a bundle of wires with an elementary diameter of 0.9mm to 2.00mm with heavy PET tape wrapped over it.
- In case of even heavier use, a galvanized iron tape can be wrapped over the bundle of wires.

DSTA

- Double tape armour of galvanized iron.
- Heavy armour with excellent resistance to crushing, shocks and rodents (over 120% coverage).
- It is not suitable where tensile strength is required or where a tight bend radius and some flexibility are needed.
